

School Transition Services

What are transition services and why are they important?

Parents naturally worry about their children's future. They want to make sure their children are ready for work, college, living on their own and all the other things that come after high school. Transition services help prepare students with disabilities that have an individualized education program (IEP) for adult life.

Many students with disabilities drop out of school, but are not ready for the adult world. If a student has an IEP, school districts must provide services to help the student move from school to post-high school activities. Transition services can be used to help students get ready for:

- College
- Tech school
- Work
- Adult education
- Adult services
- Living on their own
- Participating in their community

When do transition services start?

South Carolina law requires transition services to start when the student turns 13.¹ Transition planning must be done before the student's 13th birthday. For students who are in special education, their IEP must include a statement of goals for the student after high school and the transition services needed to reach these goals.

Who should be a part of transition planning?

¹2 SC Code Ann. Regs 43-243 (IV)(D)(1)(b)(2011): Transition services may be included at ages younger than thirteen if considered appropriate by an IEP team.
<https://www.scstatehouse.gov/coderegs/Chapter%2043.pdf>

The most important person for transition planning is the student. The plan should be based on the student's needs. To help determine those needs, the team should take into account what the student is good at, what the student likes, and what the student wants to do after school. Transition planning should also include input from:

- Teachers
- Parents
- School district transition experts (examples: transition coordinators or career specialists)
- Others who work with the student (Examples: therapists or counselors)
- Outside agencies who work with adults (See next section for examples)
- Someone from the school district who can make decisions about paying for things on the transition plan

What outside agencies should be involved in transition planning?

School districts should invite outside agencies who work with adults to help with student transition planning. These outside agencies should start helping while the student is still in school. Many agencies provide important transition services, like job coaching, help with finding a job, help living on your own, etc. If no one from the adult service agency comes to the meetings, the school district should take other steps to get the agency to help. Examples of adult service agencies include:

- SC Vocational Rehabilitation Department
- SC Department of Mental Health
- SC Commission for the Blind
- Disabilities & Special Needs Board
- Centers for Independent Living, like Able SC and AccessAbility

Note: If the student receives Social Security Disability (SSDI) or Supplemental Security Income (SSI) benefits, the student may want to contact Community Work Incentives Coordinators (CWIC). They are specially trained counselors funded by Social Security to assist SSI and SSDI recipients make informed choices about working. The program is known as Work Incentives and Planning Assistance (WIPA). In South Carolina, Able SC provides this service, the independent living center located in Columbia and Greenville; you may contact this resource directly at 800-681-6805. You can also contact SSA's Ticket to Work helpline, which is 1 - 866-968-7842. Also, if you are a client of SC Vocational Rehabilitation Department (VR) you may contact your VR counsellor for benefits planning information.

What should transition plans include?

The student's IEP must include:

- Goals to help the student be ready for what comes after school
- Classes that will help the student be ready for adult life (also known as "course of study")
- Services to help the student be ready for adult life
- Who is responsible for getting each thing done

School districts can offer services like:

- Teaching the student how to write a resume
- Counseling or therapy to help the student be ready to work
- Visiting a job site
- Teaching the student daily living skills
- Teaching the student how to understand work evaluations
- Teaching how to request disability accommodations at college or tech school

How can the school district find out the student's interests?

The school district must do assessments that are appropriate for the student. The assessment will include talking with the student and the parents. It should also include testing to provide information about the student's:

- Interests
- Personality
- Strengths/General abilities
- Physical ability
- Mental ability
- Needed Supports
- Classroom learning style
- Potential in an area of work
- If the student is working, there should be a report based on an observation of performance at work.

Results of these assessments should not be used to limit post-secondary options, but to help inform the IEP team for planning for transition services. For more information, students and parents can visit the [The National Technical Assistance Center on Transition](https://transitionta.org/) <https://transitionta.org/> .

What is an individual graduation plan?

A South Carolina law² seeks to make graduation rates higher and drop-out rates lower. Schools must now provide students experience with real-world problem-solving skills and work opportunities. Under the law, all students must have an individual graduation plan by the end of 8th grade. The individual graduation plan should help the student transition into work, work training, or college. The individual graduation plan must:

- Make sure that the student’s work goals match the classes (“course of study”) the student is taking
- Be based on the student’s work interests (“cluster of study”)
- Include academic subjects to make sure the student can graduate
- Include work experiences (examples: internships and mentoring)
- Be flexible to allow change in the student’s work interests
- Include parts of the student’s IEP when appropriate
- Be approved by a certified school guidance counselor and the student’s parents or guardians

Who should be involved in developing the individual graduation plan?

Schools should include the special education teacher in the development of the individual graduation plan. Also, middle schools and high schools must provide students with the services of a career specialist to help students with school-to-work activities. The career specialist should also help students become aware of different types of work (“career clusters”).³

What is a summary of performance?

A summary of performance is a report that shows what the student has learned in school and what the student is able to do. The school district does this report for

² [South Carolina Education and Economic Development Act](#) passed in 2005 and schools were to comply by July 2011. SC Code of Laws Ann. 59-59-10 to 59-59-250 (2011 Supp.) <http://www.scstatehouse.gov/code/t59c059.php>

³ [South Carolina Department of Education, Career Cluster Guides](#), <https://ed.sc.gov/instruction/career-and-technology-education/career-guidance/career-guidance-resources/>

students with IEPs who age out of special education services (age 21) or graduate with a high school diploma. It is usually done the last two years a student is in high school. The report must suggest how to help the student be ready for the things he or she wants to do after school. The student then decides whether to share the report with colleges, adult agencies, vocational and rehabilitative centers, employers, and others.

How can a student let colleges know about his or her disability needs?

Colleges and tech schools do not have to find students with disabilities and offer them help. The student needs to tell the college or tech school that he or she has a disability and ask for help. If the college or tech school gets money from the federal government, it cannot discriminate against students based on their disability. Almost all colleges and tech schools get money from the federal government. Most have an office called Disability Student Services to help students with disabilities.

What are some things a student might ask the college or tech school to do?

What the student asks for will be based on the student's disability and individual needs. Examples can include:

- Letting the student take a reduced course load
- Arranging for someone to take notes
- Allowing tape recorders
- Sign language interpreters
- More time to take a test
- Special computer software

What proof must the student provide to the college?

Colleges or tech schools may require proof of the student's disability and that the student needs help. Some schools require more proof than others. Examples may include:

- The name of the student's disability
- A report from the expert who decided the student has this disability
- An explanation of how the expert made this decision
- How the disability affects the student's life
- How the disability affects the student in school

A copy of an IEP or Section 504 plan from high school is generally not enough proof for a college or tech school. If the student has had a special education evaluation in the last year or two, it may be accepted. Colleges and tech schools do not have to pay for an evaluation to prove the student's disability. Students should contact the college or tech school as soon as possible to find out what they will need to provide the school.

What programs are available for a student that exits school without a high school diploma?

College of Charleston REACH, Carolina LIFE, Clemson LIFE, Coastal Carolina LIFE, and Winthrop Think College are college programs in South Carolina for students with intellectual disabilities. These programs offer the chance to experience college life. They can help students get ready for work and living on their own. For more information, please visit [Think College](https://thinkcollege.net/college-search?f[0]=tc_state_province%3ASouth%20Carolina) [https://thinkcollege.net/college-search?f\[0\]=tc_state_province%3ASouth%20Carolina](https://thinkcollege.net/college-search?f[0]=tc_state_province%3ASouth%20Carolina) .

Students may also want to check on options with their local technical schools or community colleges for non-degree seeking programs that may be offered. Students could also seek out more information on certification programs/trade school programs.

What is a vocational rehabilitation agency?

Vocational rehabilitation agencies like S.C. Department of Vocational Rehabilitation (SCVRD) or S.C. Commission for the Blind (SCCB) are partners with the schools in preparing students for school to work transition. SCVRD/SCCB provide pre-employment transition services (pre-ETS) for students with disabilities who are either eligible for special education services or protected by Section 504 of the Rehabilitation Act of 1973. Pre-ETS are important in preparing students for life after school. They are available without the need to apply for VR services. Pre-ETS include:

- Job exploration counseling
- Work-based learning experiences in integrated settings
- Counseling on post-secondary opportunities
- Workplace readiness training
- Self-advocacy instruction

Local VR offices are required to help by:

- Attending individualized education program (IEP) meetings for students when invited
- Developing work opportunities for students with disabilities, including

internships, summer employment and apprenticeships

- Working with schools to coordinate and ensure the provision of pre-ETS

Students can also apply for VR services while in high school. Once a student applies and becomes eligible for SCVRD or SCCB services, the student works with the agency to develop an Individualized Plan for Employment (IPE). It is important to apply for services early so that the IPE will be in place before student exits school. Having an IPE in place before the student exits school is *essential* to ensure a smooth transition process in which students do not suffer delays in services and can continue the progress toward employment they began while in school.

What else can help in making a transition plan?

See Disability Rights South Carolina's fact sheet, "When a Child Grows Up: The Legal Effects of Becoming an Adult." It includes information about making medical decisions, Social Security benefits, and voting. A transition plan could include training about these areas.
